

-  The first version of the app could only build routes over roads.
-  People who traveled by car were happy with this feature.
-  The next update added an option to build walking routes.
-  After that, an option to use public transport in routes was added.
-  Later, route building for cyclists was planned.
-  Even later, an option to build routes through all of a city's tourist attractions was added.

Code is not Maintainable

- The app was a success from a business perspective.
- The technical part caused many headaches.
- Each time a new routing algorithm was added, the main class of the navigator doubled in size.
- The app became too hard to maintain.
