

A much better approach

A better approach follows that will not bend the metal as much in the process of creating it:

Modeling the System

- This software, like most, will change over time. In this example, there are two major components that may change: the expert system and the CAD system.
- These systems can vary independently. Either the CAD system can be upgraded or the Expert System can be enhanced.
- The challenge is to minimize the impact one has on the other.
