

# Technical Debt can be seen as a tool.

- Some view it as a tool. A means to an end.
- Technical debt is a tool used by startups to gain an advantage in a competitive market.
- Adding code that requires more work to fix later, often for short-term gains.

# Technical Debt can be unintentional

- Technical Debt can be unintentional, caused by inexperience or lack of education into design patterns.
- I hypothesize that an excessive reliance on AI without understanding the code we write could very well result in technical debt.
