

FAÇADE

*Provides
a **simplified interface** to a library,
a **framework**, or any other
complex **set of classes**.*

Façade

*Provides a **simplified interface** to a complex **subsystem***

- Might provide **limited functionality** - in comparison with **working directly** with the subsystem.
- However, it **includes only** those features that **clients needs**.
- Facade is useful to **integrate** your app with a **library** that contains a lot of features
